技术规格

Background:	This gene encodes glucocorticoid receptor, which can function both as a transcription factor that binds to glucocorticoid response elements in the promoters of glucocorticoid responsive genes to activate their transcription, and as a regulator of other transcription factors. This receptor is typically found in the cytoplasm, but upon ligand binding, is transported into the nucleus.
Applications:	WB, IHC, IF
Name of antibody:	NR3C1(Ab-211)
Immunogen:	Synthesized non-phosphopeptide derived from human GR around the phosphorylation site of serine 211 (N-E-S-P-W).

Full name:	nuclear receptor subfamily 3, group C, member 1 (glucocorticoid receptor)
Synonyms :	GR; GCR; GRL; GCCR; GCRST
SwissProt:	P04150
IHC positive control:	Human breast carcinoma tissue
IHC Recommend dilution:	50-100
WB Predicted band size:	86 kDa
WB Positive control:	Hela cells treated with PMA (125ng/ml, 30min) lysate
WB Recommended dilution:	500-3000
IF positive control:	A549 cells
IF Recommend dilution:	100-500
