技术规格

Background:	Protein ubiquitination controls many intracellular proc esses, including cell cycle progression, transcriptional activation, and signal transduction. This dynamic proc ess, involving ubiquitin conjugating enzymes and deu biquitinating enzymes, adds and removes ubiquitin. D eubiquitinating enzymes are cysteine proteases that s pecifically cleave ubiquitin from ubiquitin-conjugated protein substrates. This gene encodes a deubiquitinati ng enzyme which lies in a gene cluster on chromoso me Xp11.23
Applications:	ELISA, IHC
Name of antibody:	USP11
Immunogen:	Synthetic peptide corresponding to a region derived f rom 951-963 amino acids of human USP11

Full name:	ubiquitin specific peptidase 11
Synonyms:	UHX1
SwissProt:	P51784
ELISA Recommended dilution:	5000-10000
IHC Positive control:	Human thyroid cancer;Human gastric cancer
IHC Recommended dilution:	20-100
